PANJI ABDILLAH ASLAM

TELECOMMUNICATION ENGINEER

panjiabdillahaslam@gmail.com | +6282283297239 | https://www.linkedin.com/in/panji-abdillah-aslam/

PROFESSIONAL SUMMARY

Bachelor's degree in Telecommunications Engineering from Telkom University in Purwokerto, with a focus on telecommunications, networking, and the Internet of Things (IoT). Completed an internship at PT Telekomunikasi Indonesia in the Telkom Infrastructure (TIF) Division and gained experience developing an IoT-based monitoring system as part of a Capstone Design project. Possesses skills in network analysis and troubleshooting, device integration, and data processing, and is able to work collaboratively and adapt to new work environments.

EDUCATION

Bachelor of Telecommunication Engineering, 3.63/4.00

Telkom University Purwokerto | September 2022 – July 2026

- Relevant Courses: Computer Networks, Data Communications, Communication Systems, Signal Processing, Software-Defined Radio, Telecommunications Engineering Lab, Artificial Intelligence, and Big Data.

Computer and Network Engineering

SMK N 1 Tanjung Morawa | June 2019 – June 2022

INTERNSHIP EXPERIENCE

PT Telekomunikasi Indonesia, Tbk. — Telkom Infrastructure (TIF)

Intern — Telkom Infrastructure Division | July 2025 - September 2025

- Monitoring and validating network outages in the service area of PT Telkom Witel Purwokerto using the WOC and MAGU systems.
- Monitoring technicians' work and the progress of fault resolution in the field.
- Analyze the distribution of tickets by region, type of issue, and resolution status.
- Validate and correct fault data based on the technicians' work results and available reports.
- Identify incident tickets that are behind schedule and document them for follow-up.

Deli Serdang Regency Community Empowerment Office

Intern | October 2021 – December 2021

- Enter and manage data using Microsoft Word and provide administrative support for activities.
- Supporting the preparation and smooth conduct of meetings.

PROJECT

IoT-Based Compost Monitoring System — Capstone Design / Final Project | 2025 – 2026

- Designing an IoT-based compost monitoring system using the ESP32 with integrated temperature, humidity, pH, TDS, and water level sensors.
- Implementing MQTT, ThingSpeak, and Firebase for real-time data transmission, storage, and monitoring.
- Implement the K-Nearest Neighbors (KNN) algorithm to classify the maturity level of compost based on measurement parameters.
- Developing a mobile app to serve as an interface for monitoring compost data and conditions.

Course Project

- Design an Arduino-based automatic lighting system with an LDR sensor to detect light intensity and control the lighting conditions.

- Analyzed approximately 50,000 data points and compared the performance of Linear Regression, Support Vector Regression (SVR), and Regression Trees, achieving an accuracy of over 90%.
- Conducting a drive test on the 4G LTE network in the Purwokerto area and its surroundings using the XL Axiata provider and analyzing the measurement results obtained from the RSRP, RSRQ, SINR, and UL/DL throughput parameters.
- Conducting 5G New Radio (NR) network coverage planning at the 3500 MHz frequency in Ajibarang Subdistrict using Atoll 3.4, by performing radio propagation modeling and simulation to evaluate network coverage based on RSRP and SINR parameters, and analyzing the simulation results to identify coverage quality and SINR variations influenced by inter-site interference.

TECHNICAL SKILLS

- Telecommunication & Networking: Fiber Optic (Splicing, Installation, Troubleshooting).
- Microsoft Word, Microsoft Excel, Microsoft PowerPoint.
- Teamwork, Problem-solving, Communication, Adaptability, Time management.
- Language: Indonesian — Native, English — Basic

ORGANIZING COMMITTEE EXPERIENCE AND TRAINING

Telcoversarry: Anniversary of the Bachelor's Degree Program in Telecommunications Engineering
Equipment Division | November 2024

- Prepare the necessary supplies and facilities for the duration of the event, arrange the venue, and ensure that equipment is available as needed for the event.
- Conduct inspections and monitor the use of equipment throughout the activity.
- Coordinate with other divisions to meet facility needs in order to ensure the smooth running of the event.

Telcoversarry: Anniversary of the Bachelor's Degree Program in Telecommunications Engineering
Basketball PIC | November 2023

- Responsible for ensuring that all basketball game requirements are in place throughout the event.
- Helps ensure that the series of matches proceeds according to the schedule and the event’s requirements.

Fiber Optics Training
Participants | March 2023

- To study the types and characteristics of fiber-optic cables and their applications in communication networks.
- Practicing the process of splicing fiber-optic cables using the fusion splicing technique.

Introduction to the Metaverse in Indonesia, Thematic Academy — Digital Talent Scholarship
Participants | March 2023

- Learn the basic concepts and technological developments of the Metaverse in Indonesia through the Metaverse 101 training program.
